INOX STAINLESS STEEL DRILL CHUCKS

LLAMBRICH

The most complete Stainless Steel Drill Chuck Program,
available in Keyed, Keyless, and also in Hybrid model types.
For use in the medical, dental, and food industries

Manufactured from stainless steel to withstand corrosion. All FGE & GE models are bead blasted with glass balls and have passivation by a electro-polishing technique. This adds additional protection against all types of corrosion, eliminates undesirable residual contaminants, and improves the finish of the surface profile.

ASL & AKL WRENCH LOCK & KEY LOCK SUPER PRECISION KEYLESS CHUCKS

ALBRECHT

Albrecht offers two drill chuck models designed specifically for CNC machining centres.
ASL models have a wrench lock facility to allow extra tightening force to be applied
AKL models have a non-rotating hood - the chuck is opened & closed via a hex key inserted into the side of the body.
Key-Lock models can be run forward & reverse and are the most accurate chucks available.
Key-Lock models are excellent for use on CNC maching centres because sudden braking will not cause chuck to open.
